CONSENT AGREEMENT CONCERNING LABORATORY FINDINGS ASSESSMENT AND NUTRITIONAL THERAPY:

To Whom It May Concern:

The Natural Health Center offers laboratory testing for the purpose of biochemical assessment of the patient. We also offer nutritional care for our patients.

Since a nutritional deficiency may or may not be associated with a specific disease, or it may be the cause of the disease, or it may occur as a result of that disease, it is important for you to understand fully that our sole concern in your case will be your nutritional program and your ability to metabolize and utilize the nutrients that you consume.

We will not diagnose, treat or cure any specific disease, and the nutritional recommendations we make based on laboratory tests, physical and clinical findings, history and symptoms, does not constitute treatment for any disease or affliction, real or imagined by you.

In the nutritional management of a case, we routinely prescribe numerous vitamins, minerals, enzymes, homeopathies, phytopharmaceuticals and other nutritional substances, …and we do not want you to have any misconceptions about their use in this clinic. In the event that any vitamin, mineral, food or other nutritional substance mentioned above is prescribed or administered in your case, we want you to understand explicitly that its purpose will be for:

1) The improvement of your overall nutritional status;
2) To improve your metabolism;
3) For improvement of the sense of well-being;
4) To improve appetite;
5) For gain or reduction in weight;
6) For possible remission or reduction of pain where present;

However, you must understand that you may not receive any of these benefits because they do not occur predictably with every patient and in some cases, they may not occur at all.

Also understand that this office may choose to use not only oral routes of administration of nutritional products, but we may also use injectable routes (IM, Sub-Q, IV). Oklahoma Law states that the appropriately certified Chiropractic Physician may use vitamins, minerals or other nutritional substances by oral or injectable procedures.

Before you sign this agreement, we want you to understand that our viewpoint concerning nutrition and the need for certain nutrients, is not necessarily shared by the American Medical Association, The Food and Drug Administration and quite possibly other similar agencies or organizations.

If you sign this agreement, you will be signifying that you disagree with these organizations in so far as their opinion differs with ours concerning nutrition substances, which, in our opinion, appears to be indicated for your nutritional needs.

(Continue to Intravenous and Injectable Therapy Consent Form)
Natural Health Center utilizes several types of injectable procedures including intravenous intramuscularly and intra-articular procedures. These include intravenous Vitamin C (ascorbrates), hydrogen peroxide, and ozone (an oxidative therapy), chelating therapy (with calcium EDTA, DMPS, DMSA), UBI (ultraviolet blood irradiation/biophotonic therapy), and nutritional and homeopathic remedies added to any of the above procedures or as “stand alone” injectable procedures.

The method of administration of Vitamin C, hydrogen peroxide, chelating therapy, UBI, nutritional medicines, and homeopathic remedies, the purpose for its administration in your case; its potential for good; and its potential for harmful side effects will be fully explained to you via the following. You will indicate, by your signature at the end of this form, a desire to undertake the recommended complete understanding of such recommended therapy/therapies along with our limited legal liability in the event such therapy is unsuccessful.

**Ascorbates**: We have advised you that Ascorbic Acid (Vitamin C) has been approved by the Food and Drug Administration for use as a food supplement and as an essential vitamin and nutrient of the body. Although not officially approved or disapproved for intra-arterial or intravenous use, its use via these avenues of administration has been well documented in the medical literature since the early 1900's. It has been studied in almost all forms of disease, but the most important contribution is the attainment and maintenance of good health. It has not been reported to be harmful or dangerous when used in the concentrations or dosages employed by us. Ascorbates are being used by an increasing number of physicians for the treatment of immune dysfunction, infectious diseases, and cellular dysfunction of all types, as well as for treating nutritional deficiencies. The use of Ascorbic Acid is not generally approved by the medical associations and/or other groups on the grounds that this substance has not yet been shown to be “safe” or “effective” or usual, customary, and reasonable”. Because of the lack of this approval, and because a majority of doctors do not use it, insurance companies ordinarily do not pay for Ascorbic Acid therapy.

**HYDROGEN PEROXIDE**: (and other oxidative therapies): You have been advised by us that hydrogen peroxide has been approved by the Food and Drug Administration for use as a food preservative and topically as an antiseptic solution. It has neither been approved or disapproved for intra-arterial or intravenous use although its use has been well documented in medical literature since 1920. It has been studied in the treatment of arteriosclerosis of the heart, head and legs and has been found to increase the effectiveness of radiation in cancer cases. It has not been reported to be harmful or dangerous when used in the concentrations or dosages employed by us. Hydrogen
peroxide is used increasingly by a minority of physicians for the treatment of immune dysfunction, pulmonary diseases and cell and tissue hypoxia. The medical associations and/ or other groups do not generally approve the use of hydrogen peroxide on the grounds that this substance has not yet been to be “safe” or approved, and because a majority of doctors do not use it, insurance companies ordinarily do not pay for hydrogen peroxide and other oxidative therapies.

CHELATION THERAPY  (utilizing predominately calcium and sodium EDTA, and occasionally DMPS, or DMSA): You have been advised by us that chelation therapy has been cleared by the Food and Drug Administration for mobilization and reduction of heavy metals (such as lead) from the body where undesirable quantities are present and confirmable by laboratory tests. We have advised you that chelation is a therapy for arteriosclerosis and related conditions. Medical associations and/or other groups have disapproved this usage on the grounds that this substance has not yet been shown to be “safe” or “effective” or “usual, customary, and reasonable”. Hopefully, this stance will change in the near future due to new research indicating that the intimal lining under the coronary artery plaque has been found to have many times the heavy metal concentrations as compared to adjacent coronary samples. At this time, however, a majority of doctors do not use it therefore insurance companies ordinarily refuse to pay for chelation therapy.

UBI (ULTAVIOLET BLOOD IRRADIATION/BIOPHOTONIC THERAPY): UBI therapy got its start in the 1920's when a device was developed for extracorporeal treatment of the blood. Researchers came to the understanding that the central mechanism of the therapy was the secondary emissions of biophotons from the blood cells activated by the treatment. The therapy had significant success in the treatment of bacterial, viral, and auto-immune diseases, and in the neutralization of biological toxins.

The pioneer that irradiated the first human subject was Emmett Knott. The patient had a case of sepsis (bloodstream infection) and had been declared beyond help by the attending physicians. The female patient responded dramatically to the treatment, totally recovered, and later bore a normal child.

The first research article on this therapy was published in June of 1934, but little attention was paid to it. By June of 1942, 6,520 patients had been treated with UBI. Not only had the treatment worked nearly every time, but it does so in the complete absence of any harmful effects.

The procedure is performed with blood being withdrawn from the patient using a needle and tubing that has a special quartz crystal in the middle. The part is called a couvette (pronounced Q-vette). As the blood passes through the quartz couvette, it is exposed to ultraviolet light and collected in a syringe with the anticoagulant. The blood is then given back to the patient and exposed a second time to the ultraviolet light. The system is a “closed” system in which the blood is never exposed to the air and remains in a totally sterile environment. The maximum amount of blood to be treated does not exceed 1.5cc per pound of body weight.

The research on UBI performed at Hahnemann Hospital in Philadelphia, Portland
Sanitarium and Hospital and Mayo Clinic were quite impressive. By the 1940’s, several dozen physicians were regularly using UBI to treat bacterial infections, pneumonia, poliomyelitis, botulism, non-healing wounds, encephalitis, peritonitis, asthma, pelvic inflammatory disease, hepatitis, and many other infectious, inflammatory and autoimmune disorders. Surgeons were particularly interested in the use of UBI both pre and post-operatively to treat infections and The American Journal of Surgery ran many articles on the treatment.

Then along came antibiotics. Since they were “patentable” and far less “labor-intensive”, UBI fell out of favor and essentially disappeared from use in the United States. However, now we are seeing increased resistance to all antibiotics by a spectrum of infectious agents. More and more antibiotics are being researched and developed with increasingly higher degrees of toxicity to the human. This is why we are seeing a resurgence of the interest in UBI.

HOMEOPATHIC AGENTS: Homeopathy is a method of medical treatment designed to stimulate the body's own healing processes in order to cure illness. It is based upon the discovery that a substance in small doses may alleviate symptoms similar to those it causes at higher doses. The phrase “likes are cured by likes” is often used to describe a basic concept behind homeopathy.

Thus, the two cornerstones of homeopathy are that “likes are cured by likes” and that the remedies are properly diluted to eliminate or minimize their toxic effects.

The science of homeopathy was developed by the German physician and chemist, Dr. Samuel Hahnemann, in the early 1800’s. Through numerous homeopathic experiments called “provings”, he furthered the known theory that “likes are cured by likes”. Dr Hahnemann then determined that the effects of the remedies he tested on himself were too toxic at the conventional dosage level. He found that when a remedy is properly diluted, healing is achieved without the severe side effects.

In homotoxicology, diseases are considered to be ultimately caused by toxins, whether toxic chemicals, bacterial exotoxins, biological endotoxins, or post traumatic cellular debris. Furthermore, disease symptoms are said to be the body's attempt to heal itself and should not necessarily be suppressed.

In general, homeopathic products are designed to work with the body's defense mechanisms and facilitate the body's elimination of the toxic substances. When used in combination formulations which contain measurable amounts of homeopathically-prepared active ingredients, they can be utilized by Physicians to treat specific indications. All homeopathic agents are approved therapy agents by the FDA. Utilization of the oral ampules (a pharmaceutical grade, non- pyogenic, saline based medication) via and injectable route is considered an off-label usage which we may use in your case.

OTHER NUTRITIONAL MEDICATIONS: Other nutritional medications may be used in an injectable procedure in your case. These could include amino acids, B vitamins, macro minerals (such as calcium or magnesium), trace minerals (such as selenium, copper, zinc, manganese, chromium, molybdenum, etc), or compounded agents such as glycerizzhic acid or reduced glutathione or germanium to name a few.
Whether or not ascorbates (or other nutritional medicines), hydrogen peroxide (or other forms of oxidative therapy) chelation therapy, homeopathic medication and/or ultraviolet blood irradiation (biophotonic therapy) is "safe" or "effective" for a specific condition depends upon the degree of likelihood of injury from the use of the procedure(s) when properly administered, upon the prognosis for the condition if left untreated and upon your cooperation in the following of the dietary, metabolic nutrient recommendations, and rest regimen which accompanies the procedure(s). It is believed in your case that ascorbates (or other nutritional medicines), and/or hydrogen peroxide (oxidative therapy), ozone and/or chelation therapy, and/or Homeopathic medications, and/or UBI is proper under these criteria, and you will quite probably improve in the condition for which you are under treatment and in your overall health. However you must understand that no one can or will guarantee the results of any of these therapies which may be administered to you here at Natural Health Center. Further, because the use of ascorbates (or other nutritional medicines), and/or hydrogen peroxide (oxidative therapies), and/or chelation therapy, and/or homeopathic medications, and/or UBI is regarded as experimental for the reasons previously cited, we cannot and do not offer this procedure to you except upon the condition you do release us from any legal responsibility for harm resulting from its use in your case. Your signature on this agreement will constitute a full and final release of our legal responsibility resulting from the administration of ascorbates (or other nutritional medicines), and/or hydrogen peroxide (oxidative therapies), and/or chelation therapy, and/or homeopathic medications, and/or UBI in your case and/or any other medical treatment which may be necessary as a result thereof.

I HAVE READ AND UNDERSTAND THE ABOVE. Under the conditions indicated, I hereby place myself under your care for ascorbates (or other nutritional medicines) and/or hydrogen peroxide (oxidative therapies), and/or chelation therapy, and/or homeopathic medications, and/or UBI, and agree to the above release. I also give my consent that all photographic materials, tissue, urine or blood specimens taken of me may be displayed, published and otherwise used for educational and teaching purposes as long as my identity remains anonymous.
